

2009 National Floriculture Career Development Event

Problem Six

Assume you are a sales clerk at In Bloom Again. The shop is known for handling an extensive line of gift items, as well as floral items. There is currently a 50% discount being offered on all brass and ceramic merchandise. Harriet Miller, a long time customer and friend of the shop owner enters. She is carrying a box containing a crystal vase you sold her for \$99.00 plus tax a couple of weeks ago and you recognize the box. Mrs. Miller tells you that when she opened the box, which had never been opened when she took it home, a small piece of glass fell out. You do not have a replacement vase in stock and Mrs. Miller is going to shop, so you suggest that you deduct the price of the vase from her bill when she finishes shopping. She selects two pairs of brass candle holders priced at \$45 per pair, a ceramic painted robin priced at \$55, a Thanksgiving Wreath priced at \$58, and a dozen white roses at \$39. These are all regular prices. The current sales tax rate is 8.25%. As you are writing the ticket, Mrs. Miller asks for an additional \$25 cash on her debit card so she can stop at the grocery store on the way home.

What amount will you charge on her debit card? Round all amounts up to next cent.

- A. \$109.45
- B. \$101.32
- C. \$56.99
- D. \$84.45
